STATE OF CALIFORNIA – HEALTH AND WELFARE AGENCY

EDMUND G. BROWN JR., GOVERNOR

DEPARTMENT OF SOCIAL SERVICES

744 P Street, Sacramento, CA 95814

January 29, 1979

ALL-COUNTY LETTER NO.79-7

TO: ALL COUNTY WELFARE DEPARTMENTS

SUBJECT: COUNTY SAMPLE FOR QUALITY CONTROL

REFERENCE:

Many counties have established a system of quality control review which utilizes the Department of Social Services (DSS) sample selection procedure. The county specifies the sample size desired, then DSS Data Management and Analysis Bureau (DMAB) staff arrange for a computerized random sample selection of that size.

If a county should wish to use fewer cases than the number requested, additional random sampling must be done within this random list. This procedure is to insure that there is no sampling bias (e.g., cases should not be taken from only the first part of the file). Random number tables have been issued by DMAB to be used for this subsequent random sampling. In addition, it has been the practice of DMAB staff to do a randomization within the initial random list for the counties. The random order has been posted in red pencil next to the sample cases.

As you know, a much larger number of quality control documents are now being processed. Due to this increase in workload, DMAB staff will no longer do the subsequent randomization of the county random samples. In order to assure an unbiased county sample, those counties using fewer cases than the total appearing on the county sample list should randomize the cases on the list. Use the random number tables attached to this letter (Attachment 1) or any other random number table. Attachment 2 gives instructions for the use of these tables. These same instructions were attached to All-County Letter No. 74-3.

Any questions should be directed to the information desk, Data Management and Analysis Bureau, (916) 322-2230 or (ATSS) 492-2230.

Sincerely,

R. E. REICH
Deputy Director

Instructions for
RANDOMIZATION FOR THE COUNTY SAMPLE

1. "Page" Division

The list or file of cases should be divided into pages, real or hypothetical, not exceeding 88 cases per page.

2. Random Selection

Random selection of a case consists of a random choice of a page and a random choice of a case on that page. Counties will receive two tables of random numbers, one for page numbers (four-digit numbers) and one for selecting a case on a page (two-digit numbers).

3. Using the Random Number Tables to Select Cases

(a) *If the number of pages of the sample universe is less than 1,000, ignore the left digit in each column of page numbers. If less than 100, ignore the left two digits. If less than 10, use only the right-most digit.*

(b) *Each month, begin at a random point in each table. Record this point by page, column, and position in column in working papers. These papers must be available for State review.*

(c) *Using the table of random page numbers, take the first page number down the column from the starting point which does not exceed the number of pages in the sample universe. Turning to the table of random cases on a page, select the first two-digit number not exceeding the number of cases per page. The two numbers together specify a random case.*

(d) *Cases which have been sampled in the last six months must be discarded and another case randomly selected. Record the sample case.*

(e) *If the end of a random number table is reached before the required number of sample cases has been selected, loop around to the beginning of the table.*

Example: A county has divided its cases into 23 pages with 20 cases per page.

	Random Page Numbers		Random Case on Page
	1069		31
	9819	*Starting point*	>20
Starting point	>6141		83
	5221		6
	3803		19
	2716		18

Page 41 is too high. Page 21 is taken; the 20th case on that page.

Next is page 3, the 6th case (83 being too high).

Then page 16, the 19th case, etc.
