SUBJECT: RECORDING "TIME TO INVESTIGATION" INFORMATION IN THE
CHILD WELFARE SERVICES/CASE MANAGEMENT SYSTEM
(CWS/CMS)

The enactment of Assembly Bill 636 (Chapter 678, Statutes of 2001) placed increased importance on the need for accurate, timely, and complete Child Welfare Services (CWS) data. The CWS/CMS system is the primary source of information for the Quarterly County Data Reports for the California Child and Family Services Review (C-CFSR) for each child welfare agency. This All County Information Notice (ACIN) is intended to assist counties in meeting critical CWS program documentation, data reporting, and program performance measurement requirements. This and future ACINs will provide information to assist counties in uniformly following program policy and data entry protocols to continuously improve data in CWS/CMS.

Child Abuse/Neglect Referrals with a Timely Response (Measure 2B)

This outcome measure is a process measure designed to determine the percent of child abuse and neglect referrals that have resulted in a timely in-person investigation. It determines the percent of cases in which face-to-face contact with a child occurs, or is attempted, within the regulatory time frames in those situations where a determination is made that the abuse or neglect allegations indicate significant danger to the child. The validity of this measure relies on social workers entering their completed and attempted investigation information correctly and timely in the CWS/CMS application.

This is a state process measure developed in accordance with Manual of Policies and Procedures, Division 31, Sections 31-110.3, 31-115 and 31-120, which specify when in-person immediate and 10-day investigations shall be conducted. If the referral was identified as requiring a 10-day response, the investigation must have been attempted or completed by the end of the tenth day after the referral was received (the day the referral was received is counted as day one). Additionally, if a referral was identified as

requiring an immediate response, the response must have been initiated or completed by midnight of the day after the referral was received.

Methodology

The methodology utilizes CWS/CMS data which identifies the number of child abuse/neglect referrals received within the quarterly report period that resulted in an investigation for both immediate and 10-day response types. For immediate response types, the number of referrals that had actual responses by midnight of the next day is compared to the total number of referrals that were designated "immediate" responses. For example, if in one quarter there were 100 referrals determined to be immediate responses, and 90 of those referrals had actual responses by midnight of the following day, then 10 of the referrals did not receive a timely response. Therefore, the rate of timely investigations is 90 percent. Similarly, 10-day response types include the number of referrals with actual responses within 10 days compared to the number of referrals that were designated as "10-day" responses.

The attached data entry instructions clarify how this information should be entered into the CWS/CMS application. If you have questions or need further information, please contact your C-CFSR Consultant at (916) 651-8100 or send an e-mail to chldserv@dss.ca.gov.
